

mutation rate = 3e-09 (n=199 replicates)

community (present strains)

-
- Figure 1 illustrates the evolution of a population of 16 individuals over 16 generations. The population starts with 16 individuals of the 000 genotype (pink circles). The evolution proceeds through various combinations of mutations, represented by different colors. The final population consists of 16 individuals, with 15 having converged to one of the 10 genotypes and 1 failing to converge (U).
- | Generation | Genotype | Count |
|------------|--------------------------|-------|
| 1 | 000 | 16 |
| 2 | 000,001 | 1 |
| 3 | 000,011 | 1 |
| 4 | 001,010 | 1 |
| 5 | 000,001,010 | 1 |
| 6 | 000,001,011 | 1 |
| 7 | 000,011,111 | 1 |
| 8 | 001,010,101 | 1 |
| 9 | 001,010,110 | 1 |
| 10 | 000,001,010,011 | 1 |
| 11 | 000,001,010,101 | 1 |
| 12 | 000,001,010,110 | 1 |
| 13 | 000,001,011,100 | 1 |
| 14 | 000,001,011,111 | 1 |
| 15 | 000/111 (converged pair) | 1 |
| 16 | 001/110 (converged pair) | 1 |
| 17 | 010/101 (converged pair) | 1 |
| 18 | 011/100 (converged pair) | 1 |
| 19 | U (failed to converge) | 1 |
